NURASPECS SOLUTIONS

A PROPOSAL FOR AT-TANZEEL SCHOOLS, IKORODU

# One school. A connected digital future.

An integrated school portal for academics, families, finance and boarding.

PREPARED BY

NuraSpecs Solutions
School management, thoughtfully connected.

24 October 2026
Concept and implementation proposal
No pricing included

nuraspecs.com / info@nuraspecs.com

01 / THE OPPORTUNITY

# Build on a strong foundation.

A respectful, evidence-led proposal to extend the school's existing digital services.

## The recommendation

NuraSpecs proposes a connected portal that brings student records, learning, fees, attendance and boarding into a coherent experience for school leaders, staff and families. The existing public website can remain the school's front door.

## What our research established

The school website promotes Hifz and Arabic learning, lists primary and secondary classes, and describes boarding and health-care facilities. These are reflected in the proposed workflows. [1–3]

## An existing results service is already linked

The public website contains a "Check Results" link to app.attanzeelschools.com. We could not inspect the linked application during this review, so its functionality and reliability remain unverified. This proposal is an opportunity to assess, integrate or improve existing services; it does not assume the school has no portal. [1]

## The outcome we would work towards

Less duplicate entry for staff, a clearer view of outstanding fees, controlled report publication and more convenient access for parents. Baselines and success targets would be agreed during discovery rather than presented as guaranteed improvements.

Suggested first step
A 30-minute discovery conversation with school management, the academic lead, bursar and boarding representative.

02 / EXPERIENCE & COVERAGE

# One portal. Six perspectives.

Purposeful access for the people who use the system every day.

## School leadership & administrators

School-wide dashboards, learner records, admissions, configuration, approval queues and audit visibility.

## Teachers & academic leads

Assigned class registers, score entry, validation, report submission, Hifz journals and learning schedules.

## Bursary & finance

Fee schedules, invoices, instalments, verified payments, receipts, settlement reconciliation and balance exports.

## Hostel wardens

Room and bed allocation, boarding roll calls, leave approvals, check-in/out and welfare escalation.

## Parents & students

Linked-child views, approved results, attendance, fee balances, school notices and timetables. Student access follows school policy.

03 / ACADEMICS

# A complete learning record.

Academic configuration should reflect the school’s policies and teaching model.

## Admissions and student information

Online enquiry and application forms; document checklists; assessment and interview stages; offer decisions; approved enrolment; admission numbers; guardian relationships; class placement; promotion, transfer and withdrawal history. Duplicate checks and controlled imports reduce repeated records.

## Results and report generation

Configure subjects, CA components, exam weightings, grade boundaries and term/session rules. Validate ranges, flag incomplete marks and calculate totals consistently. Teachers submit; academic leads moderate; authorised approvers publish. Corrections require an audit trail. Generate branded PDF reports and cumulative records.

## Attendance and learning schedules

Daily and subject registers, present/late/absent/excused status, date and class filters, attendance summaries, absence follow-up and class timetables. Assignment reminders and lesson resources can follow in a later phase. Attendance notifications depend on the approved communication provider.

## Hifz and Arabic learning

Record memorisation targets, new learning, revision, fluency and Tajweed observations. Track Arabic reading, writing, vocabulary and comprehension separately. Share teacher-reviewed progress with guardians. The detailed assessment rubric will be agreed with the school’s programme leads.

Demo coverage: sample admissions stages, student directory, editable class attendance, six-subject report generation, score validation, publication status, printable reports, Hifz progress and a weekly timetable.

04 / FINANCE

# From invoice to confidence.

An accountable payment workflow designed around Nigerian school operations.

## Fees and family accounts

Define fees by class, term and service; apply approved discounts, scholarships and instalment plans; generate invoices; track arrears and issue receipts. Handle tuition, boarding, meals, transport and other school-approved charges. Reversals and refunds require separate authorisation.

## Proposed payment gateway integration

Select Paystack or Flutterwave after confirming the school’s merchant account, settlement arrangements and preferred channels. Parents would use the provider’s hosted checkout. Secret keys stay on the server, and the portal should never collect or store raw card details.

## Verification before the ledger changes

A browser success message is insufficient. The server must verify the transaction, reference, amount, currency and intended invoice, validate webhook authenticity, and prevent duplicate processing. Pending, failed, abandoned and reversed transactions need explicit handling. Daily reconciliation should compare the ledger against gateway settlements. [5]

## Finance oversight

Give the bursar exports by class, period and fee category; show outstanding balances; separate payment recording from adjustment approval; record who changed a transaction and why. Final accounting exports and tax treatment must be scoped with the school’s finance team.

What the demo does
Simulates full or partial payments, pending/failed outcomes, balance updates and downloadable text receipts. It does not connect to a payment provider or transfer money.

05 / BOARDING & OPERATIONS

# Care beyond the classroom.

Boarding and welfare deserve the same clarity as academic administration.

## Hostel management

Configure houses, wings, rooms and bed capacities. Enforce eligibility and prevent double allocation. Keep room assignment history, boarding fee links and roll-call registers. Route leave requests through guardian consent and school approval, with expected return times, check-out/check-in and overdue-return escalation.

## Welfare and safeguarding

Provide restricted incident records, visitor logs and escalation to designated staff. The school describes health-care provision on its website; a production clinic module could support authorised medical staff with visits, referrals, allergies and medication records. Sensitive medical information must not appear in general staff dashboards. [2]

## Communication and parent engagement

Target notices by class, role or boarding group. Track acknowledgement where needed. Add email/SMS through approved providers, with delivery logs, failure handling and communication preferences. Guardian relationships must be verified before child-specific information is released.

## Optional expansion modules

Library borrowing and overdue items; transport routes and authorised pickup; staff records and leave; asset inventory and maintenance; procurement approvals; online assessments and learning resources. These are discovery options, not completed demo features or assumed first-release commitments.

Demo coverage: sample room capacity, allocation and release, leave request approval and a local noticeboard. Clinic, transport, library, payroll and real notification delivery are proposed extensions.

06 / TRUST & ARCHITECTURE

# Designed for responsible use.

Production controls must be implemented and verified before real pupil data is introduced.

## Cloudflare deployment approach

The supplied demonstration is a static site suitable for Cloudflare Pages Direct Upload. A production implementation would add a server-side API (for example Cloudflare Workers), a relational database and protected document storage. D1/R2 or alternative services should be selected after assessing scale, residency, retention and recovery needs. [4]

## Identity and permissions

Use individual accounts, secure password hashing or a managed identity service, staff MFA, password recovery, rate limits and secure expiring sessions. Enforce role and record permissions on every server request. Verify guardian-child relationships. Never use the demo’s shared password or browser storage as production access control.

## Privacy and school data

Agree the school’s and NuraSpecs’ responsibilities, permitted purposes, retention schedule, access requests and incident response before onboarding. Assess obligations under Nigeria’s applicable data-protection framework with qualified advice. Minimise children’s data, restrict sensitive records and document processor/subprocessor arrangements. [6]

## Reliability and auditability

Separate development, test and production; encrypt traffic; protect secrets; log privileged actions; monitor failures; test database and file restores; document deployment rollback and data exports. Backup frequency, recovery objectives and support escalation are acceptance decisions, not guarantees made by this prototype.

Clear boundary: the supplied concept uses client-side demonstration sign-in and browser-local persistence. It is intended only for fictional data and does not provide production security, shared storage or real integrations.

07 / DELIVERY

# A phased, practical rollout.

Indicative sequencing, subject to discovery, data readiness and agreed scope.

## Phase 1 · Discover and confirm | Weeks 1–2

Review the existing portal, stakeholders, workflows, grading rules, fee policies, boarding requirements and data exports. Approve a scope and acceptance checklist.

## Phase 2 · Build the foundation | Weeks 3–5

Implement secure accounts, roles, student/guardian records, core academic setup, imports and audit logging. Validate with school representatives.

## Phase 3 · Connect key workflows | Weeks 6–8

Configure results, attendance, fee invoicing, selected gateway and boarding essentials. Test verification, reconciliation and role boundaries.

## Phase 4 · Pilot and train | Weeks 9–10

Migrate a controlled sample, pilot one class and boarding group, train staff, verify reports and reconcile balances against source records.

## Phase 5 · Launch and stabilise | Weeks 11–12

Confirm sign-off, migration totals, restore readiness and rollback. Introduce families, monitor support issues and agree the next improvement cycle.

08 / ACCEPTANCE & HANDOVER

# Prove the essentials first.

A shared definition of readiness protects teaching time and school operations.

## Migration and coexistence

Request authorised exports from the current provider; map fields; identify duplicates; reconcile learner totals, fee balances and historical results; perform a trial migration and obtain sign-off. Keep the existing service available during the agreed transition. No integration or historical-data transfer is assumed without access and provider cooperation.

## Acceptance tests

Confirm that each role sees only permitted records; a parent cannot access another child; invalid scores are blocked; report totals match the approved grading rules; failed or duplicate payment events do not alter balances; hostel capacity cannot be exceeded; and backups restore correctly. Test common mobile devices, keyboard access and constrained connections.

## Training and handover

Provide role-specific walkthroughs, an administrator guide, data-import templates, backup/restore procedures, account ownership records and a support escalation route. Agree ownership, source-code/licensing terms and exit/data-export arrangements in the implementation agreement.

## Questions for the discovery meeting

Which functions already work in the current results portal? How many learners, staff, campuses and boarders are in scope? Which report formats and assessment rules are approved? Which gateway is preferred? Who approves fee adjustments and leave? What data can be exported? What support hours and recovery targets are required?

Programme dates and service levels will be agreed after discovery. This proposal contains no price or commercial quotation.

09 / EXPERIENCE THE CONCEPT

# A five-minute walkthrough.

Use fictional records to assess the experience before discussing implementation.

## 1. Explore as an administrator

Sign in as admin@demo.nuraspecs.com using NuraDemo!2026. Review the overview, filter the directory, mark attendance and save the register. Open Results & reports, change a score within its permitted range, save and publish.

## 2. Review finance and boarding

Open Fees & payments, record a simulated partial payment and download its receipt. Try a failed payment to confirm that the ledger does not change. In Hostel management, release and reallocate a bed, then create and approve a sample leave request.

## 3. Switch perspectives

Sign out and choose Teacher, Bursar, Hostel warden, Parent or Student. The email pattern is role@demo.nuraspecs.com, where role is teacher, bursar, hostel, parent or student. All use NuraDemo!2026. Parent and student screens focus on the fictional learner Amina Yusuf.

## 4. Make the next conversation specific

Note which workflows fit today, which need to reflect the school’s rules, and which should integrate with an existing service. Demo changes persist only in the current browser; the administrator can restore starter records in Settings & audit.

Let’s shape the next step together.

10 / RESEARCH NOTES

# Sources and scope boundaries.

Public-source review completed on 24 October 2026. Information may change.

### [1] At-Tanzeel Schools - Home

https://attanzeelschools.com/

School context, Hifz/Arabic, public contact and the linked Check Results service. The linked application was not assessed.

### [2] At-Tanzeel Schools - Our Facility

https://attanzeelschools.com/our-facility/

Boarding, health-care and library context. Operational details require confirmation.

### [3] At-Tanzeel Schools - Our Classes

https://attanzeelschools.com/our-classes/

Primary, junior secondary and senior secondary class context.

### [4] Cloudflare - Pages Direct Upload

https://developers.cloudflare.com/pages/get-started/direct-upload/

Deployment guidance for prebuilt static files, including dashboard ZIP uploads.

### [5] Paystack - Verify Payments

https://paystack.com/docs/payments/verify-payments/

Server verification and duplicate-fulfilment precautions for payment design.

### [6] Nigeria Data Protection Commission

https://ndpc.gov.ng/

Regulatory reference for production review. This website could not be retrieved during research; no detailed legal interpretation is asserted.

### [7] NuraSpecs Solutions - Company website

https://nuraspecs.com/

Public contact information and company positioning, read in the browser.
